

## Forging at the EG

From 5.3.10 – 9.3.10 was the `Mobile Lab` at the EG. The pupil of the 7.class could forge with Mr. Rimkus and his backers on two days, one and a half hour. Mr. Rimkus brought many things to the school. There were 4 smith`s hearts, 8 emboss, 3 buckets and many hammers, grippers and scrubbers, The pupil were devided in groups about 16 children.

First they must don a protection waist coast, glasses and gloves. Then they could start.

They should make a wand from a long nail. The pupil broiled the nail in the 1200 degree Celcius warm fire and worked the iron. After that they forge their own ideas or engraved something in a little metal plate.

Past forging most children liked it and see it and see it in another way.
